Lancaster Farming

VOL. 11 NO. 30 | Lancaster Farming, Saturday, June 25, 1966 | $2 Per Year

EVEN THE SHADOWS ARE SHRIVELED on this picture of some thirsty corn seen in the Lititz area this week. Although crop conditions seem to vary from section to section, and even from farm to farm, there is some general curling of corn leaves beginning in most northern areas of the county L F Photo

First Summer Job Brings Questions On Taxes For Working Teenagers

Many Delaware teenagers will take jobs for the first time during this summer vacation, according to W T McAllister extension farm management specialist at the University of Delaware Some teenagers will be working for their parents on the farm while others will work for outside employers Whatever the job, going on a payroll for the first time often raises questions about the income tax and social security tax for part-time and summer employees

In most instances an employer will require the employee to apply for a social security number when he begins the job Social security tax will be deducted from the employee's social security account As a general rule, McAllister points out, a teenager working for his parents does not qualify for social security No payment is withheld from

'New Farm' Wheat Allotment Applications Due By July 1st

Any Lancaster County farm which did not have a 1966 wheat allotment, and wishes to be considered for a 1967 allotment for winter wheat, must contact the Agricultural Stabilization and Conservation Service office by July 1 Applications can not be accepted after that date, ASCS reports

A producer eligible to file such an application is one with a farm for which no wheat allotment has been established, and for which neither the owner nor the operator has an interest in the wheat allotment on any other farm and who has available land

(Continued on Page 12)

Construction To Begin On Farm And Home Center By Late This Summer

Construction of the Lancaster County Farm & Home Center is scheduled to begin later this summer, according to an announcement this week by B Snavely Garber, president of the board of directors of the Farm & Home Foundation

Bids on the construction job will be let July 15th, Garber said, adding that about three weeks after that date the contractor should have been selected and building plans can proceed

Although the original fund drive goal of $375,000 has not been met at this time, a total of $226,000 in cash and pledges has been collected This will be sufficient to get started, Garber said, and a continuing fund raising campaign will be relied upon to complete the building as shown in the architect's sketch below

In considering the immediate construction with limited funds, the board decided to concentrate on the office section of the building When fully rented, the offices will have an income potential of $26,000 a year, Garber explained.

This one story masonry building will serve as headquarters for the farmers of Lancaster County and will house the offices of the Agricultural Extension Service, the County ASCS, Soil Conservation Service, Farmers Home Administration, and the Lancaster County Superintendent of Schools

These facilities will include a large conference room for the use of the office holders, a general meeting room, and a demonstration kitchen for the extension training program.

The multi-purpose room, shown at the left side of the sketch, will accommodate 600 people, and will have a serving kitchen in conjunction. That

Pioneer Poultry Laboratory Will Be Rebuilt

The U S Department of Agriculture's Regional Poultry Research Laboratory at East Lansing, Mich — a leading center in poultry disease studies since 1938 — will be rebuilt and enlarged under an agreement with Michigan State University

The laboratory, part of USDA's Agricultural Research Service, conducts investigations to isolate and control the agents causing avian leukosis This disease caused more than 8 million condemnations at broiler processing

Improved Process For Producing Dry Whole Milk Patented By PSU

An improved process for producing dry whole milk, patented by The Pennsylvania State University, may help solve the problem of the world's milk supply

The process will produce dry whole milk with significantly improved taste and odor qualities compared with products from conventional processing,

For every ton of lime a dairyman applies, he gets back an extra ton of milk during his rotation. With lime worth ten dollars a ton, and milk figured at eighty, that's a nice return.

Every crop you plant can benefit from correct applications of lime. Your fertilizer will work better. Soil organisms thrive. Organic matter releases nutrients more rapidly. Soil structure is improved. More trace elements become available.

And **now** is the time to spread lime. Equipment is ready to work for you. The land is firm and dry. Whether you plow this fall or next spring, the lime will be there, ready for plowing down to the root zone. Call your Agway store or representative and ask for immediate spreader service. But do it now

Potatoes are for cookin'—not for cullin'

DITHANE M-45 controls early and late blights—the most serious threats to quality and productivity in potatoes. DITHANE® M-45 is unlike any other potato fungicide you can buy. Its unique, new formulation combines zinc, manganese and di-thiocarbamates into one powerful blight fighter. This superior fungicide is effective under severe conditions such as high humidity caused by the weather or by irrigation. DITHANE M-45 protects foliage tenaciously, an ability of critical importance if rainy weather should delay your spray program.

Ask your dealer for DITHANE M-45. It is tough on blight fungi but gentle on foliage. Use DITHANE M-45 on your potatoes all season and get the best available blight control fungicide on the market today.

From Where We Stand . . .

Food For WHOSE Freedom?

There's an old saying that Uncle Sam should begin heeding pretty soon — "I can handle my enemies; it's my friends who have me worried".

This nation has a long history of trying to be friendly with nearly every country in the world. We've fed many of them, clothed them, protected them from the local bully, and even wiped their noses and dried their tears when natural disaster overtook them. Some have thanked us by "spitting in our faces", figuratively, and too often, literally. And, oh, the things they say when Uncle's back is turned! But, these are our "friends", so we can overlook their behavior. Can we? It seems to us that if we have enough friends like that we sure don't need any enemies!

We were glad to see the tone of the Food-For-Freedom bill which cleared the House recently. For one thing, it spelled out that food under this program would not be available to any nation giving aid to our enemies — North Vietnam and Cuba, specifically.

The bill, now in the Senate, will get the full, well-known, Administration pressure treatment. Johnson wants that section changed. Why? Because our biggest customer under the program, India, would be ineligible to participate if it were not changed

Secretary Freeman, in testifying before the Senate Agriculture Committee last week, said the food law should not provide an absolute bar to shipping food to nations who are in turn aiding and abetting our enemies Rather, Freeman suggested, guidelines should be laid down for the President to make any final decision regarding questionable sales.

While we agree with Freeman that it would often be difficult to determine accurately which nations are supplying materials to our enemies, this law is as good a place as any to take a stand It s about time we said to these needy nations, and any others who fit the shoe, "Look, boys, you can't have it both ways anymore Either you're with us, or you're against us."

No doubt this approach is not consistent with international diplomacy, but we don't seem to have had much success with the standard formulas, perhaps it is time we tried the direct, "take it or leave it" approach At least it should flush our enemies out into the open, and help us to know better where we stand.

We see no reason for changing the law simply because it might offend a hungry India. They need our help, and we want to give it It therefore behooves them to see that they qualify for the program, not that we weaken the program to accommodate their transgressions.

India and others, while not actually shooting at us, are helping to make it possible for our more militant enemies to do so. And they are helping to prolong a conflict which is devouring American lives at an ever-increasing rate.

We hope the Senators will have the courage and the conviction to resist Administration pressures, and that they will not weaken that section of the Food-For-Freedom bill by making the benefits available to our enemies.

★ ★ ★ ★

Another Drought Year?

Hope not, but it's beginning to shape up that way, isn't it? Spring rainfall looked real good, but that's pretty well used up by now, and then some.

About midweek, when this was written, we took a look at conditions around parts of northern Lancaster County. Most of the crops we saw looked thirsty, but because of widely scattered showers it seemed worse in some areas than others. Surface soil was dry and powdery, and you had to kick away a lot of it some places to find any dampness It almost seemed as though the little bit of moisture was trying to preserve itself by creeping deeper and deeper into the earth to escape the wrath of the withering wind and sun above.

The thirsty roots seemed to be reaching for the receding moisture, but not quite making it, leaving the plants high and very dry Many plants seemed to be "growing" smaller while they waited anxiously for rain.

Corn and tobacco seemed the crops most affected. Most of the tobacco hadn't had any rain on it since it was transplanted, and some curling of corn leaves was seen Probably one more week without rain will be critical for much of the tobacco, and will be a real setback to the corn crop.

Although the weather map shows no particular rain in sight for our area, one optimistic farmer we talked with said, "That wind's been right out of the east for awhile now; if that keeps up sooner or later it'll bring us something" Let's hope he's right.

We promise to do our part to help make it rain soon, at least we'll do all the things that usually result in rain — going on vacation next week, will wash the car, leave rain coats at home, plan to picnic, etc This procedure has never been known to fail. In fact, just writing it here is likely to bring enough rain to wash this editorial right down the Conestoga by the weekend

Weather Forecast

Hate to say it, but the weatherman calls for the hot stuff to continue for the next five days. Temperatures will average above the normal range of 85 to 62 degrees for the period, but there is a chance of cooler weather by Tuesday or Wednesday.

There'll be no general drought relief in the next five days, but widely scattered showers Sunday and again Wednesday may deliver about 1/10 inch of moisture.

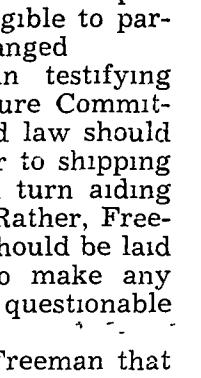
Now Is The Time . . .

By Max Smith, Lancaster County Agent



SMITH

To Recognize Cow Comfort

Anything to make the milking herd more comfortable during the hot summer months will put milk in the tank and money in the bank The cows should have free access to fresh water shade and loose salt at all times, the least effort required to satisfy their appetite will also result in greater production During the day the herd may go to pasture or to the dry lot if they have the above items In some cases it may be better to confine the cows during the day in a well ventilated barn and turn them out at night Special attention to their comfort will result in greater returns

To Shear Pine Trees

Christmas tree growers and others who may have any pine trees on their property and who want to have them grow into a desirable pyramid shape, will want to do some trimming and shaping during June and early July Some of the long terminal leaders may need to be shortened to get the tree to grow more compactly This work should be done near the end of the pine tree growing period, which is June for this area

To Inspect Lightning Rods

Buildings that are equipped with rods should have considerable protection providing the rods are attached at all points, and providing the ground rod goes into moist soil During periods of dry weather this rod or ground cable may not be deep enough to remain in moist soil and therefore, the rod system will not have a ground Attention should be given now if the system has not been checked this summer.

The Crash

Lesson for June 26, 1966

Background Scripture II Kings 24 through 25, II Chronicles 36 Jeremiah 38 through 39, 52. **Devotional Reading** Jeremiah 18 18 through 19 1.

A Jew once wrote a letter to the question-and-answer column of the B'nai B'rith monthly asking: What was the most important event in Jewish history? The editor replied that it would be hard to select just one, but in his opinion the two most important were the Exodus from Egypt, and the Exile. By Exile he meant the scattering of the Jewish people among all nations, as we see them today. The beginning of that was the crash of a city, Jerusalem, and the date was 587 B. C. The army, or part of the army of Babylon, came into Palestine and just took over the country. The famous golden city of King Solomon was reduced to rubble. With the crash of their capital (which is not wholly under Israel's control even today) went the crash of the nation, the royal dynasty, the hopes and dreams they had cherished for centuries. Thousands of good people asked themselves: How can this be? This was God's city, we are God's people." That was a theological question and raises a theological answer (as many of our problems do).

Dr. Foreman

WAY THEY THOUGHT IT WAS

What the citizen could not understand was how or why God had let them down. He had promised, by various prophets, that the royal dynasty would endure forever: he had said (by Isaiah) that no weapon formed against Jerusalem should prosper. They had made a covenant long ago with God. The Lord had delivered them out of many past calamities, he was strong enough to save them always no matter what. They could draw only one of two conclusions: Either the Lord was a god who did not keep his word, or else he was a weak God one who meant to do well by his people but lacked the intelligence or the power (or both) to do what he honestly tried to do Could it even be (they wondered) that their "god" was not god at all? Perhaps they had been worshipping an idol all this time

WAY IT REALLY WAS

The way it really was, was this: God is not weak or changeable, not boastful nor forgetful The crash of the golden city was indeed his doing, or done by his permission. But it was not a case of letting his covenant people down. It was a case of punishment. The army of an invader, even a cruel invader, may be, and at that time was, an instrument of punishment in the hand of God. That God does not change, is quite true. God is a Savior but also a Judge; and sometimes (not always, be sure) his judgements are not handed down on a distant Judgement Day. Judgement Day can be NOW, and a nation may be on trial and the verdict Guilty. It was all the prophets could do to pound this into the peoples' heads, and most of the people never did open their eyes to the inside truth.

ARE YOU PART OF PROBLEM?

"What has all this got to do with me?" is a fair question; "I'm no nation, I m only plain John (or Mary) Smith." Well, you are a part of a nation, There is such a thing as national character, good or bad. But national character is just the summing-up and interaction of private characters. And what creates character? The choices the individual makes every day. Acts of choice become habits of choice, and man's habits of choice are his character. If there were more people like you, would our country be better or worse? As Dr. Redhead is fond of saying, are you part of the problem or part of the answer?

ATTEND THE CHURCH OF YOUR CHOICE SUNDAY

FOREMAN RESIGNS

Pennsylvanian To Write 'Bible Speaks'

The Rev. Lawrence W. Althouse, minister of Calvary Evangelical United Brethren Church, Mohnton, Pennsylvania, has been selected to write the newspaper column, **The Bible Speaks,** starting July, 1966. He succeeds Dr. Kenneth J. Foreman who has retired after writing the column since 1948.

"The Bible Speaks is based on the International Uniform Lesson Outlines, produced by the Uniform Lesson Committee of the Division of Christian Education, National Council of Churches," according to Mrs. Helen Cantley, managing director of NATIONAL COUNCIL RELIGIOUS FEATURES. "It is for use of weekly newspapers and small dailies, and currently runs in nearly 300 newspapers Syndication for **The Bible Speaks** is handled by Community Press Service, Frankfort, Kentucky."

A native of Reading, Pennsylvania, Mr. Althouse is a graduate of Wharton School of Finance and Commerce, University of Pennsylvania, with a degree in economics. He is a graduate of United Theological Seminary, Dayton, Ohio, and is working on his thesis for S. T. M. degree in religious education, having completed course requirements at Union Theological Seminary, N.Y.C.

Rev. Althouse

Mr. Althouse is author of **Youth Guide on Affluence and and Poverty,** printed this spring (1966) by Friendship Press. For many years he has written the lesson quarterly materials for junior and senior high school youth, and also for the teachers' books, for the Evangelical United Brethren Church.

The International Uniform Lesson Outlines was the first major effort in which Protestant Sunday school forces of America united on April 18, 1872. It provided a series of uniform lessons which could be used in each department of the entire Sunday school, and in all Protestant Sunday schools, based on the same Scripture text.

Read LANCASTER FARMING For Full Market Reports

Chick Hatch Rate Up 2% First Five Months

Production of flock replacement chicks in Pennsylvania totaled 3,757,000 during May, 10 percent more than for the same month in 1965, according to the State Crop Reporting Service. The hatch pushed the 1966 five-month cumulative egg-type production to 15,412,000, a 6 percent gain over the January-May hatch of 1965.

Broiler chick production last month showed a 9 percent gain over May 1965 for a total of 5,440,000. The cumulative January-May total of 23,219,000 was about the same as for the comparable period a year ago.

Total broiler and replacement hatch for May was two percent more than the 1960-64 average for the month. The January-May cumulative total of 38,631,000 also indicated a two percent increase over the similar period in 1965.

Machinery, drowning and firearms were the main causes of farm fatalities in the U.S. during 1963-64 Machinery accounted for 38 6 percent, drowning, 15 8 percent, and firearms, 10 5 percent.

● Farm & Home

(Continued from Page 1)
section will be added as funds permit.

The 10.5 acre site for the proposed building, along the Route 230 By-Pass, was donated to the Farm & Home Foundation by Elmer L. Esbenshade, Lancaster. Title to the land was officially conveyed on June 30, 1965.

The Farm & Home Center will be the first such agriculturally-oriented center in Pennsylvania. In reviewing the original objectives of this farm center, board president Garber said that "we will continue to seek the generous support of all those individuals, business interests, and organizations that share the conviction of keeping Lancaster County first in agriculture."

In addition to Garber, the officers and board of directors of the Farm & Home Foundation are: L. H. Skromme, vice president, New Holland; Mrs. Landis Myer, secretary, New Holland; Noah W. Kreider, treasurer, Manheim; Levi H. Brubaker, chairman of fund raising committee, Rohrerstown; John H. Herr, chairman steering committee, Lancaster; Jacob Kurtz, Jr., building committee, Ephrata; Willis Z. Esbenshade, Lancaster; Mrs. Robert E. Nolt, Rohrerstown; David E. Buckwalter, Lititz; Benjamin Burkholder, New Holland, Paul Cope, Quarryville; Mrs. Kenneth Eshelman, Conestoga, Amos H. Funk, Millersville.

Victor M. Longenecker, Elizabethtown; Richard P. Maule, Quarryville; Thomas J. Monaghan, Lancaster; Phares S Risser, Elizabethtown; Dr. E I. Robertson, Lancaster; M Maxwell Smith, Lancaster; Melvin R Stoltzfus, Ronks: Eugene R Wissler, New Holland, and honorary member Floyd S. Buscher, Denver.

Architects for the proposed Farm & Home Center are Haak & Kaufman.

● Summer Jobs

(Continued from Page 1)
his wages and no retirement benefits are earned

Federal income tax is due on income in excess of $600 per year. However, income tax is usually withheld by employers starting with the first paycheck. If less than $600 income is received by the youth during the year, the money which was withheld will be returned when he files a tax return Of course, if he earns more than $600, he is required to file a return.

McAllister emphasizes that parents still have the right to claim children as exemptions as long as the child is under the age of 19 or is a full-time student for whom the parents provide more than one-half the support. Unless wages were actually paid to the parents rather than to the child, parents should not include income earned by the child as a part of the parent's taxable income.

McAllister believes it is a good idea for parents who pay children for doing farm work to make the payment by check at the time the work is performed. The check serves as proof that payment was made, and the parents can use it as a legitimate farm expense. For this reason, children should receive cash payment for farm work rather than a calf, an automobile or free gasoline, he concludes.

500 DOZEN EGGS PER TON

with new Ful-O-Pep "500" Egg Feeds

Modern computers have determined that the most profitable egg feed in terms of lowest feed cost per dozen is one which produces a dozen eggs on 4 lbs. of feed—equivalent to 500 dozen eggs per ton.

New Ful-O-Pep "500" Egg Feeds, for floor or cage, are designed to give you 500 dozen eggs per ton on a year-around basis, under good environmental conditions. If you are a good manager, Ful-O Pep 500 is *made for you.*

What would 500 dozen eggs per ton do for *your* profit column?

● Poultry Lab.

(Continued from Page 1)

plants in 1964 — the single most costly disease with which poultrymen have to deal.

ARS poultry researchers at East Lansing, directed by Dr. Ben R. Burmester, said they welcome the reconstruction plans, since the 30-year old laboratory's facilities are becoming increasingly obsolete for the highly technical work involved in virus-disease studies. The new facility, to be constructed several miles south of the present location, will provide office and laboratory space for 14 scientists.

A special feature of the laboratory will be an isolation ward for infected chickens, with tight security against the escape of harmful viruses. There also will be a poultry house designed to produce specific-pathogen-free (SPF) chickens. These birds are raised under sanitation conditions designed to prevent infection by all poultry viruses, bacteria and other disease-producing agents that are highly contagious.

Plans include an incubator and breeding house, plus five ordinary cage houses to maintain experimental stock

The university also will benefit from the move, officials said, because it needs the 50 acres occupied by the present laboratory for new classrooms and student housing These requirements, officials added, were unforeseen when the university invited ARS to its campus to establish the laboratory..

Under the new agreement, the university will provide another 50-acre plot to replace the old site. In addition, the university will contribute funds equal to the value of the laboratory buildings being vacated. These funds, plus $450,000 already appropriated by Congress to enlarge the laboratory, will pay for the planned construction.

● FFA Week

(Continued from Page 1)

Donnell of Wayne County; and the national FFA vice-president, James Stitzlein of Ashland, Ohio.

Greeting the assemblage the night of June 30 will be David R. McClay, head of the department of agricultural education at Penn State; James C Fink and Dean Witmer of the agricultural education division of the Department of Public Instruction, Harrisburg, and Jerome K Pasto, associate director of resident education in the College of Agriculture at Penn State

A final assembly will be held the morning of July 1 to present awards College of Agriculture personnel will be available the morning of July 1 to discuss with FFA members the various career opportunities in agriculture

OUR CONGRATULATIONS

Herb And Mrs. Hess

for a fine record of performance on your flock!
(For details see advertisement on next page.)

And our thanks for your comments when we called to congratulate you the other day. What you said about this flock is very true — to make good records you need

A Good Bird

Top Management

And

A Good Feeding Program

It is evident that you had all three of these.

All of us at Miller & Bushong are happy to hear that you feel our

EARLY BIRD

Optimum Performance Line

along with good birds and your top-notch husbandry played a part in getting such good performance.

Your comments on our service also were very much appreciated.

Thanks again for your kind remarks about our feeding program.

Our best wishes for continued good success with your next flock.

264.0 EGGS PER PULLET HOUSED IN 365 DAYS - 318.6 EGGS PER PULLET HOUSED IN 485 DAYS

Mr. and Mrs. Herbert S. Hess, R. D. 2, Quarryville, Pa.

Actual Records Show PROFIT-POWER Of DeKalb Pullets

Mr. and Mrs. Herbert Hess know the value of keeping accurate records — also the value of keeping DEKALB Layers.

2962 DEKALB STARTED PULLETS — 20 weeks old — were housed on December 22, 1964.

These DEKALB birds laid 264.0 eggs per pullet housed in 365 days. Average lay was 72.4%, liveability 95.27% and average liveability per month 99.60%.

In 485 days these DEKALB birds laid 318.6 eggs per hen housed. Average lay 66.5%, liveability 92.80% and average liveability per month 99.55%.

Mr. and Mrs. Hess say: "We had very good egg quality and excellent liveability with our DeKalb birds."

YES — IT PAYS TO KEEP DEKALB!

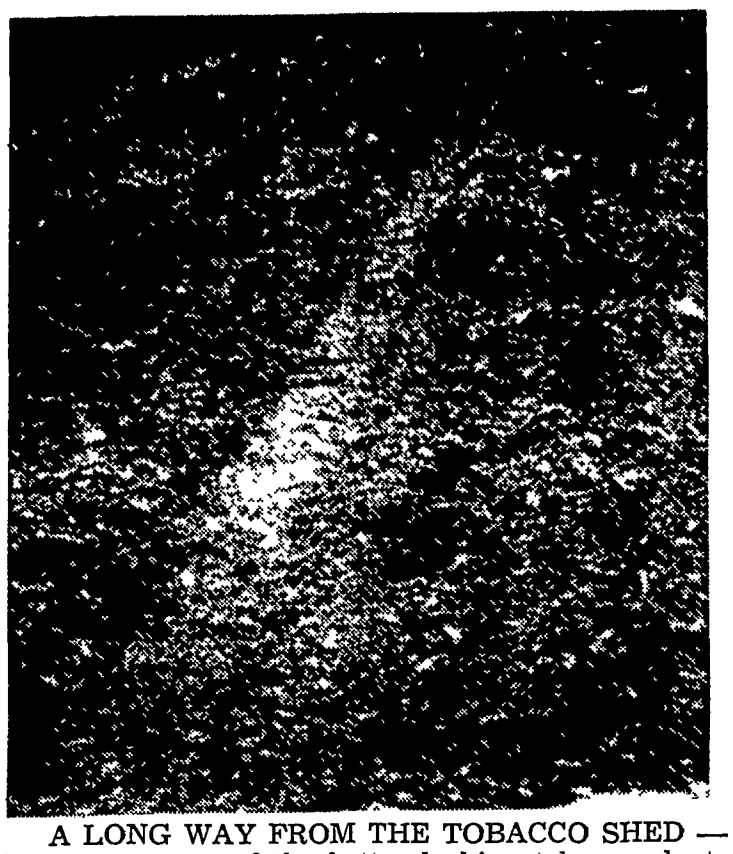
County Farm Picture — Barley Down, Tobacco Struggling



A LONG WAY FROM THE TOBACCO SHED — These were some of the better looking tobacco plants seen this week in the Lititz area, the others were so dried up they wouldn't even show up in the photograph. These plants, put out two weeks ago, had some green growth but were not up to par. The farmer felt they'd make it though if they got a good rain in the coming week. Looks like late tobacco this year.
L. F. Photo

GOOD STRAW ON THE BARLEY THIS YEAR — too good! This lodged barley is a common sight around Lancaster County since that heavy wind and rain that passed through the area three or four weeks ago. The farmer who owns this field said he had a good crop, both grain and straw, and he thought the combine would pick up most of the grain, but added that another year he doubted he would fertilize as heavily.
L. F. Photo

● Milk Processing

(Continued from Page 1)

says Dr. Stuart Patton, in charge of experiments leading to the new product. It should make a better quality whole milk, often termed nature's most perfect food, available to more people, Patton points out.

Patton and associates believe the new dry whole milk will appeal to both the consumer and the dairy farmer. Dry whole milk presently available is not widely accepted as a beverage although powdered skim milk has a large market in this country. Tasty dry whole milk could increase the sale and use of milk, Dr. Patton reports, especially in areas of the world where fresh milk is not available.

The improved process has been evaluated in both industrial and government laboratories and has been found an effective means of improving dry whole milk.

A commercial product based on the process is undergoing test marketing.

The newly patented process takes milk fat, separated from whole milk, and treats it with steam under a relatively high vacuum. This step forms and removes flavor substances that would create a problem during storage. The fat can then be re-emulsified into skim milk. At this point the product can be evaporated into dry whole milk or can be used in dry ice cream mixes or dry cream powders.

The Agricultural Experiment Station at Penn State reports that some leading milk product manufacturers are considering the development.

● Now Is The Time

(Continued from Page 4)

To Control Corn Borer

Early sweet corn growers may want to do everything possible to have a big early crop of corn; this is usually to the growers' advantage. Corn borers reduce the vitality of the stalk and better yields will result if they are controlled. The first treatment should be given at the appearance of the tassel in the whorl of the plant and repeated four times at 5-day intervals; either DDT or Sevin may be used. If the fodder is to be fed to livestock, do not use DDT.

Weeds Choking Your Pond?

We've got just what you need to clean 'em out fast:

ORTHO Diquat

Use a little Diquat in that choked-up pond of yours, and in ten days you'll have clean clear water for irrigation, swimming or even a fishing hole.

Diquat kills aquatic weeds like nothing you've ever seen before. You name it: water lettuce, water fern, pondweeds, coontail, southern naiad, waterhyacinth, elodea. They'll all wilt, collapse and die.

Diquat is easily applied — Use it as directed. It is non-hazardous to fish. In fact, it would take twenty times the maximum recommended dosage to be at all harmful to fish. After ten days, you'll even be able to swim in the water or use it for spraying or irrigating. That's all it takes for Diquat to dissipate completely.

The best news is the economy. A little Diquat goes a long way. See use right away . . . we'll be glad to tell you exactly how little you'll need for your pond. You're in for a happy surprise.

Local Dealer Attends Wayne Feed School

John M Heisey, representing the Heisey Farm Service of Lawn and Bellaire, was one of 30 persons attending a recent dealer school on Wayne dairy feeding at The Host Motel, Lancaster.

The two-day school was designed to train dealers to better serve their customers through improved feeding and herd management programs.

Speakers at the school were: Dr. William Byer, manager, dairy department, M W. Geary, R W.D. Hiestand, and C.M. Sackett, all representatives for Wayne Feeds, and R. B. James, Wayne's seaboard division manager

This school was one of the first in a series designed to improve dealer service to customers

SOCIETY OF FARM WOMEN GROUP NO. 3 MEETS

Lancaster County Society of Farm Women #3 met June 18, at the home of Mrs Gilbert Paul, Stevens R1

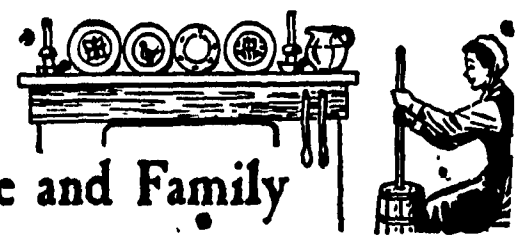
President Mrs William Eby conducted the meeting, and Mrs Paul was in charge of devotions The group accepted an invitation extended by Moyer's of Ephrata to visit the plant on Wednesday, June 29.

The following were appointed to the program committee for 1967 Mrs Donald Graybill, Mrs Elam Shelly, Mrs. Esther Petticoffer, Mrs Lloyd Martin, Mrs Earl Miller, Mrs. Robert Hollinger

The following were appointed to serve on the committee for the refreshment stand for the Ephrata Fair Mrs Irvin Burkholder, Mrs. Ivan Eberly, Mrs Clarence Stauffer, Mrs Gilbert Paul, Mrs Willie Stober, Mrs Harvey Gehman, Mrs Earl Latshaw, and Mrs. Harold Stuber.

The program was a demonstration by Mrs W Scott Tagg of Hatfield on Cooking Over Coals She prepared potatoes in a variety of styles, shishkabobs, fish, blueberry pancakes, corn, and a one-dish meal in aluminum foil.

The next meeting will be the family picnic which will be held on Sunday, July 17, in Walter's Park at Stevens R1 with dinner served at 12:30 p.m.



For the Farm Wife and Family

By Mrs. Richard C. Spence, Food Editor

Superb Seafood Salads

Seafood salads are both tasty and nutritious. If you are serving them in the summertime it is necessary that you take extra precautions to see that they are properly chilled and refrigerated until serving time. Some of these salads double as sandwich fillings. Also, some so-called "salads" are served as hot casseroles. One of the recipes we have for you today is an extra-special one — to be served at an extra-special luncheon — possibly for a June bride.

SPENCE

VEGETABLE-SHRIMP MACARONI SALAD

- 8 ounces small shell macaroni
- 1 envelope (1 tablespoon) unflavored gelatin
- ¼ cup water
- 1 package (10½ oz) frozen mixed vegetables
- 1 cup water
- 2½ teaspoons seasoned salt
- 2 teaspoons dried, crushed mint leaves
- 1½ teaspoons basil
- 1 package (7 oz) frozen deveined shrimp, thawed and coarsely chopped
- 2 cartons (8 oz each) plain yoghurt

Cook macaroni in boiling salted water 5 to 7 minutes, or until tender, yet firm; drain. Soften gelatin in ½ cup water in large mixing bowl. Combine vegetables, 1 cup water, salt, mint, and basil in saucepan. Bring to boil, stir in shrimp and cook about 3 minutes, or until shrimp and vegetables are tender. Stir shrimp mixture and macaroni into gelatin Refrigerate until mixture is just cool Thoroughly fold in yoghurt Turn into 6½ cup ring mold refrigerate until firm When ready to serve unmold and serve immediately

HOT SEAFOOD SALAD

- 1 cup mayonnaise (not salad dressing)
- 1 teaspoon grated lemon peel
- 2 teaspoons lemon juice
- 2 teaspoons grated or finely minced onion
- ½ teaspoon salt
- 2 cups cooked crab meat or shrimp (or 1 cup each)
- 2 cups chopped celery
- 1 cup sliced or chopped almonds
- ½ cup grated sharp Cheddar cheese
- 1 cup crushed potato chips
- Lemon quarters

Blend mayonnaise with lemon peel, juice, onion and salt. Mix lightly with crab, celery and almonds. Spoon into individual serving dishes or one 1½ to 2 quart casserole. Top with a sprinkling of cheese and potato chips. Bake at 400 degrees, 15 minutes, or until piping hot. Serve with lemon quarters. 6 servings.

* * * *

APPLE-TUNA SPRINGFIELD

- 1 cup canned apple slices, drained and chopped
- 1 can (about 7 oz.) tuna
- ½ cup diced celery
- ½ cup chopped toasted almonds
- ½ teaspoon salt
- ¼ cup mayonnaise or salad dressing
- 3 tablespoons French dressing
- 8 frankfurter rolls
- Watercress, for garnish

Combine chopped apple slices, tuna, celery, almonds, salt and dressings. Toss lightly to mix; taste and add additional seasonings if needed. Chill about 1 hour to blend flavors. To serve, fill rolls with mixture and garnish with watercress. Makes 4 servings of 2 filled rolls per serving

You'll achieve new glory as creative cook if you try this imaginative way with a familiar food, ordinary canned salmon.

DILLED SALMON MOLD

- 2 cans (1 lb. each) salmon
- ½ cup lemon juice
- 1 cup dairy sour cream
- 1 cup shredded Cheddar cheese
- 2 tablespoons grated onion
- 1 teaspoon salt
- ¾ teaspoon dill weed
- 2 tablespoons (2 envelopes) unflavored gelatin
- ½ cup water
- 2 tablespoons cider vinegar
- 1 cup whipping cream, whipped

Drain salmon; remove bones and skin; flake with a fork. Place salmon in a large mixing bowl; add lemon juice. Fold in sour cream, cheese, onion, salt and dill weed. In a small saucepan soften gelatin in water and vinegar. Heat over low heat, stirring constantly, until gelatin is dissolved. Gradually stir gelatin mixture into salmon mixture. Fold in whipped cream just until combined. Turn into 6-cup mold. Refrigerate until firm. Unmold onto serving platter and garnish. Serves 8-10.

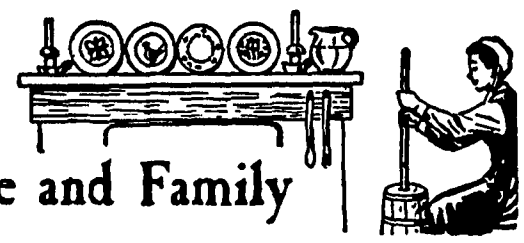
● For The Farm Wife

(Continued from Page 10)

SPAGHETTI SALAD

- 8 ounces elbow spaghetti or macaroni
- 2 cans (7 oz. each) tuna, drained and flaked
- ⅔ cup chopped celery
- ⅔ cup sliced pimiento-stuffed green olives
- ¼ cup chopped onion
- Tomato Aspic*
- ½ cup mayonnaise or salad dressing
- 1 tablespoon lemon juice
- ½ teaspoon salt
- Curly endive or water cress sprigs

Set out an 8-inch ring mold. Cook spaghetti or macaroni in boiling, salted water until tender, yet firm, 5 to 7 minutes; drain. Rinse with cold water and drain thoroughly. Meanwhile, in large mixing bowl combine tuna, celery, olives and onion. Fold in spaghetti. Prepare Tomato Aspic*. Fold 4 cups spaghetti salad mixture into aspic. Rinse ring mold with cold water and spoon in aspic mixture. Chill until firm, about 4 hours. Blend mayonnaise or salad dressing, lemon juice and salt. Pour over remaining spaghetti salad and mix lightly. Cover and chill. Unmold aspic ring onto serving plate. Fill center with remaining spaghetti salad. Garnish aspic ring with curly endive or water cress sprigs. Serve immediately.



For the Farm Wife and Family

Ladies, Have You Heard? . . .

By Doris Thomas, Extension Home Economist

THOMAS

Use Protein Foods In Summer Salads

If a salad is the main course, use generous quantities of protein foods. Choose from

- Sardines
- Anchovies
- Cheese
- Canned meat
- Sandwich meat
- Cooked pork, beef, lamb, chicken, or turkey
- Hard-cooked eggs

For extra flavor to hearty salads, marinate cubes or strips of cooked beef, pork, or lamb in vinegar or lemon juice seasoned with herbs at least an hour before adding to the salad.

Planning Life Insurance

Follow these guides in determining the kinds and amounts of insurance protection you should buy.

Get your policies together. Read them and understand exactly what protection each provides.

Examine your resources as a family. This includes your savings, social security and property plus human resources involving your family's health, skills, abilities, and earning capacity.

What kinds of losses would be most serious to you? Can you afford to cover any risks out of your pocket?

Cover first the losses that would be most serious.

Learn as much as you can about the kinds of insurance protection that are available.

Find a good, reliable insurance agent . . . one whose judgment you can trust in helping you make decisions.

Tuna Terminology

Study the label on canned tuna . . . it determines the type of tuna to use for particular dishes and can make a difference in the price you pay.

Solid-pack tuna contains solid fillets. Use "as is" for salads, or in pieces in hot or cold dishes.

OPERATION SKYHOOK — Helicopter hovers over roof of Red Rose feed mill at York, slowly lowering bin hopper into position. The copter took part in positioning six bins as part of a $68,000 construction program to increase finished feed storage capacity at the York plant.

See Our Want Ads For Bargains

Feed Mill Uses Helicopter To Install Bins

An area feed firm recently installed six, 1500-lb. bins on a rooftop in about five hours. Done the conventional way, hauling each section up for assembly and welding, the job could have required as long as five weeks according to Robert Burger, John W. Eshelman & Son engineer.

So Burger sent for a sky-hook. Through the construction firm installing the bins, the Eshelman mill enlisted the services of the Carson Helicopter Service, Perkasie, to lift and place the bin hoppers in position inside the plant roof.

The six bins installed at the York plant are part of a $68,000 program to increase finished feed storage capacity.

With the lifting aid of the helicopters, it became possible to weld the bins on the ground, eliminating the movement of many steel sections to the rooftop position.

The Eshelman company, established in 1842, operates six mills covering 21 states. Their internataional sales cover 32 countries.

● "New Farm" Wheat

(Continued from Page 1)

and adequate equipment and facilities for the successful production of a wheat crop on the farm; and who during the last five years has had at least two years' experience in producing wheat; and who as an operator expects to receive 50 percent or more of the current year's income from the total production on the farm (not including the anticipated income from wheat produced on a "new farm" allotment.) Other factors are involved, and it is suggested that interested producers discuss the details with officials at the ASCS county office.

USDA studies indicate that food purchased per capita at the retail level has decreased 200 pounds since 1909. What is purchased today is much more nearly what is actually consumed. Due to preprocessing, less food waste is taken home and there is a saving in storage.

Caloric intake has decreased too. Nutritionists estimate that the per capita consumption of calories is 400 fewer than 50 years ago. More meat is eaten today while per capita consumption of starches has gone down.

Foresters this year are planting trees for the newsprint of the 2026 A.D. editions of Lancaster Farming.

All-American To Feature S.E. Pa. Hay Show

HARRISBURG — That hay and cattle "go together" will be exemplified at the third Pennsylvania All-American Dairy Show, Sept. 12-16 in the State Farm Show Building where the annual Southeast Pennsylvania Hay Show will be staged as an added attraction.

Horace L. Mann, director of the Pennsylvania State Farm Show and in charge of the show building, said the hay show will consist of samples submitted by farmers from a dozen southeastern counties. The hay will be judged and ribbons awarded to the winners.

Contest hay will be displayed in the large arena convenient to the judging rings where it can be examined by spectators attending the dairy event.

The hay show will be sponsored by the Pennsylvania Grassland Council in cooperation with the Pennsylvania State University.

Sponsors of the dairy show are the Pennsylvania Department of Agriculture, its Farm Show Commission, and the Pennsylvania Dairy and Allied Industries Association.

Mann said both the hay and dairy shows will be open to the public without charge, and that parking will be free.

Harold R. McCulloch, dairy show manager, said premium books will be distributed by July 1 to dairy breeders who were exhibitors at the 1965 show, and that copies will be available at his office in the Farm Show Building.

He said August 15 will be the deadline for dairy cow entries.

Total meat production for 1966 in the United States is estimated at 31.5 billion pounds, as compared to 31.7 billion pounds in 1965. This is still short of the record 32.7 billion pounds of beef, veal, pork and lamb produced in 1964.

DON'T TAKE OFF THE SKIN

There's more than one reason for leaving the skin on sweet potatoes when you boil them, say Penn State extension foods and nutrition specialists. The thin skin is easier to peel off when the sweet potato is cooked, and it takes less of the potato with it. Besides, when the protective jacket is gone, some sweetness is dissolved in the cooking water.

PP&L ANNOUNCES ANNUAL SCHOLARSHIP WINNERS

These twenty-six high school seniors will begin their college educations this fall with scholarship assistance from PP&L.

Twenty-three of the winners were selected by and will attend 21 Central Eastern Pennsylvania colleges and universities under PP&L's General Scholarship Program, which provides from $250 to $1,450 per student, related to the instructional costs at each institution. Two of the awards stipulate that the students must pursue a degree in engineering. The other 21 general scholarship winners may study any course leading to a baccalaureate degree.

The remaining three students were selected by the National Merit Scholarship Corporation under a separate scholarship program for sons and daughters of PP&L employees. These students receive from $100 to $1,500 per year, depending upon financial need, and may attend the college or university of their choice.

PP&L's scholarship program reflects the Company's belief that progress is a product of education and that the nation needs the full potential of its capable young people. In addition to providing grants-in-aid directly, PP&L supports the Foundation for Independent Colleges of Pennsylvania, matches employee contributions to qualified educational institutions anywhere in the U.S., and has an educational assistance program under which employees may continue their studies in various fields.

4-H CLUB NEWS

NORTH. HOLSTEIN CLUB HOLDS DEMONSTRATION

by Earl Stauffer, reporter

The fourth meeting of the Northern Lancaster County 4-H Dairy Club was held Thursday evening at the farm of J. Robert Hess, Strasburg.

A fitting and showing demonstration was given by several older members of the club. Forty-six members and three leaders were present.

The next meeting will be held on July 28 at 7:30 p.m. when the Dauphin County Holstein Club will be the guests. Place of meeting will be announced at a later date.

LEOLA PINCUSHIONS 4-H CLUB REORGANIZES

by Cynthia McQuate, reporter

The reorganizational meeting of the Leola Pincushions 4-H sewing club was held June 14 at the home of Mrs Hoober with seven members and two leaders attending

The newly elected officers are: president, Marie Grumbine; vice president, Fay Weaver; secretary, Kathy Hoober; treasurer, Ruth Oberholtzer; song leader, Bonnie Hess; game leader, Sandra Grumbine; news reporter, Cynthia McQuate.

Following the meeting the members played some games and had refreshments.

DRUMORE SEWING CLUB HOLDS REORGANIZATION

by Jo Bookar, reporter

The Drumore 4-H Sewing Club met at Chestnut Level for its annual reorganization meeting recently.

Elected were president, Janet Cutler; vice president, Shirley Aaron secretary, Ann Gore; assistant secretary, Sherry McSparran, treasurer, Mary Douts, assistant treasurer, Sue Bookar; songleader, Linda Martin; pianist, Linda Herr, county council representative, Ann Gore, game leader, Della Matson, news reporter, Jo Bookar.

This year's leaders will be Mrs. Donald McSparran, Mrs Stanley Stauffer, Mrs Robert McSparran, Mrs Robert Housekeeper, and Miss Judy Longenecker.

WILDLIFE CLUB MEMBERS GET GUN INSTRUCTION

by Annette Long, reporter

The Lancaster County 4-H Wildlife Club met Wednesday evening June 15, at the home of Eric and Fay Stoner, 1051 Eden Road, Lancaster

Before the meeting the younger members were given instructions on gun handling, followed by target practice for all.

The next meeting will be a fishing trip, July 20

CLASHING THIMBLES NAME QUEEN CANDIDATES

by Doris Harnish, reporter

Lucy Herr was elected senior queen at a recent meeting of the Penn Manor Clashing Thimbles 4-H Sewing Club Junior queen was Kimberly Winters

Other officers elected were: song leaders, Ruth Ann McMichael and Kimberly Winters, game leaders, Beverly Martin and Kris Winters; news reporter, Doris Martin

Following the meeting, the members divided into their respective sewing groups.

PEQUEA CLUB GIVEN SEWING DEMONSTRATION

by Carol Eby, reporter

A sewing demonstration was the main feature of the first-year sewing girls at the Pequea Valley 4-H Club. It was given by three sewing leaders, Mrs. Charles Hoober, Mrs. Ronald Stoltzfus and Mrs. Amos Mull, Jr.

The Monday meeting was conducted by President Jane Hoober at the Intercourse Fire Hall. Following the business meeting games were played after which the girls departed to their respective groups—sewing or cooking—to work on their projects.

Elected at the meeting were two posture queens who will

New HIGH CAPACITY AUTOMATIC BUNK FEEDER

GIANT CAPACITY

A powerful 9 inch auger is offset within a giant, fully enclosed 12-inch steel hood. This unique design provides a reservoir for silage and feeds the full length of the feeder, greatly increasing the capacity and speed with which feed moves to the livestock. Handles the output of the largest silo unloader with ease.

FEEDS ENTIRE HERD AT ONE TIME

Feed is augered the full length of the enclosed hood and is then automatically dumped into the feeding bunk, providing equal rations to each head of livestock *at the same time*. No cattle crowding. No spilled and wasted feeds. When feed is dumped, the hood closes automatically and repeats as often as needed.

SILENT, CLOG-PROOF OPERATION

Powerful 9-inch auger never touches the metal hood; eliminating metal-to-metal friction and providing the right clearance to prevent binding and clogging even when materials have high moisture content. Horsepower requirements are greatly reduced too.

LET US GIVE YOU COMPLETE DETAILS OF THE AMAZING VAN-DALE S-17 BUNK FEEDER

CALEB M. WENGER

R. D. 1 Drumore Center KI 8-2116 Quarryville, Pa.

YOU'VE GOT TO HAVE A SYSTEM—GO JAMESWAY POWER CHORING

BIG J FILL-N-FEED SYSTEM FEEDS FAST—ALL AT ONCE

Time-cycle automated. Fills quickly...feeds uniformly...repeats. No feed separation.

Just press a button. From then on the Jamesway feeder is completely time-cycled automated. It fills the J-trough completely--then the hinged side swings open to drop all feed into bunk. This puts the same amount of feed in front of all cattle and eliminates crowding. It recycles automatically. We also sell low-cost Fill-N-Feed progressive feeder. Stop in today.

Pelleting Means More Hog Per Ton Of Feed

Pelleted feed for hogs is some 10% more efficient than meal rations when pigs are fed corn-soybean feed, reports a research nutritionist currently working on problems of swine nutrition.

Pelleting thus saves the hog producer at least $7 per ton of feed, it was calculated by Dr D. E. Becker of the University of Illinois. Writing in the spring issue of The Merck Agricultural Memo, Becker estimated that pelleted rations mean at least 60 pounds more gain per ton of feed.

"At present, 60 pounds of live hog is worth at least $12, whereas the cost for pelleting will not exceed $5 per ton of feed," he said "Hence, there can be no doubt that pelleting is an economic practice'

Contrary to earlier assumptions, Becker found that the beneficial effect of the pelleted feed is not a consequence of greater feed intake Pellet-fed pigs "actually consumed less feed daily than meal fed pigs' he said, though weight gains were more rapid

Why this should be so is still somewhat of a mystery Becker declared Form of the pellet appears to have little significance, since "pigs fed pelleted feeds reground into a meal exhibit the beneficial effect." He noted findings by other researchers that pelleting increases the digestibility coefficient of dry matter and gross energy, but not of crude protein.

"It seems likely that pellet machines cause some chemical or physical change that enables the pig to digest the diet more completely," the nutritionist speculated. "Based on our knowledge of the effect of heat on the nutritive value of corn, it does not seem likely that the heat of pelleting along is responsible for the improvement of utilization"

Farmers' Assn. Ladies Schedule Summer Plans

The Ladies Committee of the Lancaster County Farmers' Association met on Tuesday evening at the home of Mrs Ellis Mentzer to plan their summer activities and budget

'Ladies Day Out' will be held at the Abbeyville Inn at Collegeville on Friday, July 29 A smorgasbord dinner and informative program is planned

The annual picnic for all Lancaster County Farmers' Association members will be held at Sico Park Mount Joy with a picnic supper, games and fellowship There will not be a speaker

Plans were also made for a luncheon meeting with the American Association of University Women This will be held at the Groff home at Mount Joy Date to be announced later

Apple Yields Up 25% When Mulch Replaces Sod

Yields from semi-dwarf apple trees can be increased 25 to 30 percent per tree by applying mulch instead of growing sod near the base of the trees, according to eight years of experiments at Penn State University.

In 1964,65, average yields of eight-year old Golden Delicious trees were increased by 115 pounds per tree by using mulch instead of sod, says Marshall Ritter, of the Agricultural Experiment Station at Penn State The mulch conserves moisture, keeps down weeds, and maintains organic matter in the soil, the department of horticulture researcher points out.

When mulching materials are used, Ritter explains, a build-up of nitrogen, phosphorus, potassium, and boron starts a year or two after mulching. The mulch should be renewed annually about the first of July, he suggests.

Yields from Jonathan apple trees have increased as much as 50 pounds per tree when mulch is used instead of sod for ground cover, he said. Mulched eight-year old McIntosh trees have yielded 45 more pounds per tree than the trees grown under sod culture. The experiments were carried out in the University orchards.

Carl S. Bittner, extension fruit specialist at Penn State, says that fruit growers generally have some acreage of waste land or wet areas unsuited for fruit growing but ideal for growing mulch. In wet areas, Reed canarygrass grows well, he reports. In the better drained areas, orchardgrass, bromegrass, or sudangrass may be grown. Provisions must be made for mouse control, Bittner advises.

Ritter finds that the mulched trees produce apples with brighter color than trees grown with a sod culture. Also, the apples are firmer and sweeter, he adds.

Livestock products furnish about 60 percent of the protein in the U. S. food supply, states the Nutrition Research Department of the National Live Stock and Meat Board.

ALL-PURPOSE HERD FEED

RED ROSE 14 TEST COW FEED

Here is the feed you need for your herd!

Today's dairy farmers need a high energy feed — vitamin-fortified and palatable — to maintain the herd, encourage maximum milk production, help produce calves, and be adaptable to milk parlor feeding. Yet, this feed must be free-flowing and easily handled . . . and return a good profit

RED ROSE 14 TEST-COW FEED is that kind of dairy feed. It's made of high quality grains and proteins, high in fat, minerals, and digestible nutrients. Test-Cow Feed is very palatable, can be fed at all seasons, and is an excellent feed to keep appetites from lagging during warm days of summer

This feed has a course granular texture. It's ideal as an all-purpose herd feed — to be fed as it comes from the bag to milking cows, dry cows, calves, and bulls **Remember,** it is EXCELLENT FOR FEEDING DURING WARM PERIODS. Try Red Rose 14 Test-Cow Feed . . . and you'll use it always.

NEED A GOOD SILAGE PRESERVATIVE? Lancaster Sweet Mix furnishes molasses in a dry, convenient form for making grass silage It can be fed directly into the cutter or blower as the silage crop is put in the silo **Try it!**
